On January 29, 2021, in an article published by Dr Steven Quay, MD, PhD., CEO of Atossa Therapeutics, concludes " a Bayesian analysis concludes beyond a reasonable doubt that Sars-CoV-2 is not a natural zoonosis, but rather a laboratory derivative. "

Reported by PrNewswire

The article is 193 pages long and can be downloaded from Zenodo, a general open access repository managed by CERN and a short explanatory video is uploaded.

The aim of the analysis was to determine the origin of SARS-CoV-2, the virus responsible for COVID-19. Starting with a 98.2% probability that it was a zoonotic leap from nature with only a 1.2% probability that it was a laboratory escape, twenty-six facts and evidence different and independent were examined systematically.

The final conclusion is that there is a **99.8% chance that Sars-CoV-2 comes from a lab and only a 0.2% chance that it comes from nature.**

"Like many others, I am concerned about what appear to be significant conflicts of interest between members of the WHO team and scientists and doctors in China and how this will preclude an impartial review of it. 'origin of SARS-CoV-2 ,' said Dr Quay.

"Taking only publicly available scientific evidence on SARS-CoV-2 and using very conservative estimates in my analysis, I nevertheless conclude that there is no reasonable doubt that SARS-CoV-2 escaped. of a laboratory.

Additional evidence for what appears to be adenovirus vaccine genetic sequences in samples from five patients from December 2019 and sequenced by the Wuhan Institute of Virology needs explanation. You would see that kind of data in a vaccine challenge trial, for example. I hope the WHO team can get these questions answered. "

Dr Steven Quay has published over 360 contributions to medicine and has been cited over 10,000 times, placing him in the top 1% of scientists worldwide. He holds 87 U.S. patents and invented seven FDA-approved pharmaceuticals that have helped over 80 million people. He is the author of the bestselling pandemic survival book, Stay Healthy: A Doctor's Guide to Surviving the Coronavirus.

To help find the truth and get feedback on the methodologies used and the conclusions drawn in this article, a prepublication copy of this document has been sent to twenty-six scientists around the world, including currently WHO researchers. in Wuhan, Wuhan Institute of Virology scientists, as well as other leading virologists.

Recall that in May 2020 Professor Luc Montagnier , Nobel Prize in Medicine, made an identical statement before being lynched by the media.

Professor Tritto published a book "The chimera that changed the world" at the beginning of August 2020 confirming this thesis.

In July, Prof. Montagnier and mathematician Jean-Claude Perez had a publication on this subject accepted in a peer-reviewed scientific journal.

In addition, Luc Montagnier had confided in the microphone of Richard Boutry in the program "the challenge of the truth", confirming his statements of May 2020.
